## Briercrest Fruit Farm & Nursery

R. F. D. No. 3

MT. CARMEL, ILLINOIS

### The Boysen Berry

The 1938 Boysenberry crop proved beyond all doubt the great yielding ability of this largest of all berries. Their ripening season is one week to ten days later than Youngberry and the culture is the same as Youngberry, see cultural hints enclosed.

The Boysenberry is as yet relatively unfamiliar to the majority of people, even among fruit-growers themselves, but the many qualities belonging to it will no doubt bring about the general acceptance of it within a few years.

The Boysenberry is a t y, raspberry, and blackberry. It therefore of the Loganberry, and the asr business of the blackberry. It is rich in ly large size. The fact that the cold winter of freeze the fruiting buds, even as far North as the Northern seems sufficient proof that it is especially resistant to cold. fine crop of berries was harvested in this region during the summer following this severe winter.

If the planter's location is north of the Ohio River, it is safest to provide some winter protection in the form of a mulch. The plants grown in our nursery are exceptionally large and thrifty, and we claim unreservedly that they are as fine plants as can be obtained anywhere.

Prices:	Boysenberry, per 100	\$4.00
	Youngberry, per 100	\$1.50
	1 year-old Youngberry Transplants, per 100	\$2.50
